## Tunne through in 1600 blasts

UDAIPUR: (Prashant Shrivastava) It took about 1600 explosions to penetrate the tunnel through which is being constructed under the water refraction project. The length of the tunnel is a quarter to two kilometers and is located near Devendra anicut near Parsaad village. The engineers had to carry out about 1600 controlled blasts to get the tunnel through. The last blast was initiated by the Member of Parliament Arjun Lal Meena and Salumber MLA Amrit Lal Meena.

The total worth of the project is about 43.84 crores of rupees. There was a strong wave of happiness among the project team and people as this was a milestone achieved. The alignment target of the tunnel was found to be successfully achieved.

MLA and MP took the progress report of the project from the officiating additional chief engineer Rajesh Tepan. The project was approved in 2013-14 with a budget of 43 crores.

An anicut with a capacity of 33.14 MCFT is being laid on the Paarai River. About 45% of the construction work of the anicut of already complete. Lining work inside the tunnel is now pending. According to the officials, the tunnel will be completed by November of 2017 while by December next year, the anicut will be ready as well. After the completion, about 496 cusec of water will be diverted to Chaavand, Kejad, and Harchand reservoirs. Chaavand after getting water will be developed as a tourist spot. This project will also help irrigation in about 1200 hectare of landscape and as many as 27 villages will get fluoride-less water for consumption.

This is fifth such tunnel project of the Udaipur district of water refraction. Earlier tunnels were constructed under Devas and Mansi Wakal projects.

Vidya Bhawan Polytechnic Students Developed Innovative Projects

## Smart Technologies for Smart City

UDAIPUR: The final year students of three years engineering diploma course of Vidya Bhawan Polytechnic have developed innovative projects in order to contribute towards Smart City. Principal Dr Anil Mehta termed the efforts of students as smart approach.

The radio frequency based car parking system allows only authorised RFID card holder to park vehicle at designated parking. This project idea will help in controlling un authorised parking. The alcohol detection system and helmet synchronised two wheeler ignition developed are useful in controlling road accidents. If the driver breath has alcohol then vehicle will not start. Similarly without wearing helmet, the two wheeler will not start. The students have also developed voice controlled wheel chair for disabled citizens. The wheel chair moves forward, backward and sidewise as per the voice command given.

To help tourists, students developed on line guide management system. They have also developed on line blood control management system. Similarly projects on water over flow control, sorting of fruits and vegetables on the basis of size etc have also been developed. For citizens of smart city, the students have designed ultramodern residential complex which is energy efficient, liveable, and sanitized. Principal Mehta informed that most of students are from village area and their technical aptitude ensures positive outcome of Make in India mission of government of India.

## Nirmala and Prakash received Best Designer Award
