& Much More

By the Way Why Girls can't say no to Dowry?

We are habitual of watching big fat Indian weddings. Foreigners are coming to India to fulfil their dream of wedding in Indian style

her dream prince. But it is cer-

tainly not necessary to give dowry to fulfil your dreams. We are copying western world in each and every way. Girls and boys take responsibility of their

marriages in USA and Europe. Parents spend same amount on girl's education in modern

era. It looks odd to charge money from girl's parents only. Why can't girl n boy's parents divide money in equal shares? It happened a few decades ago when girls were forced to

get married to boys not of their choices.

What is bothering us to change this system in modern era? Girls are working in corporate world with dignity on much higher positions. Their future are bright and colourful. Girl ratio is less than boy's ratio.

Why do girls force their parents to spend lacs and crores on one day?

Why do we need a person to show right path all the time? Education can bring major changes in our thought process. Don't use your degrees and diplomas to get good boys for marriage. Use your own wisdom to stop this mental harassment of your parents. If a girl is not aware of her rights , how well she can teach her future generations?

I have seen small town girls copying kareena, Aishwarya and other B town actresses. I request my young female readers to copy their work style and nature. They have really worked hard to earn money. Have you ever heard of any bollywood celebrity getting married to a businessman after giving dowry?

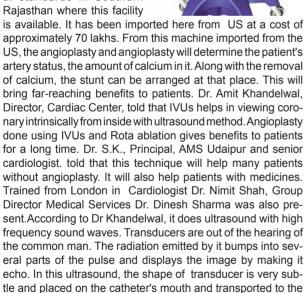

Take initiative and stop this culture immediately. Promote humanity and dignity. Don't let your parents feel inferior in front of boy's parents. After all its your life and you must live it with dignity and respect.

The exact angioplasty be possible by the use of iViewus

Udaipur: Intra-vascular ultrasound (IVUs) and rota embellishment machine have been added to Cathleb, the cardiac and vascular center of GBH American Hospital. This will make the patient's heart's exact angioplasty possible after heart attack.

Dr. Anand Jha, Group Director of GBH American Hospital, told in a press conference that this is the first cath

lab of the private sector equipped with IVUs and Rota Ablation to meet international standards in Southern

well as the blazed space. It is different from simple angiography

In simple angiography, the condition of circulation and blood flowing in the artery is detected in Sand mach. It does not detect the second layer of the artery. It is possible to see only the side view from the angiogram and not visible in place of

coconut body. It is carried out in the angle of angioplasty as

This benefit is IVUs

During angioplasty from IVUs, cardiologists and team get additional information about all these. It shows the precise position of the blockage. The intimate layers are quite thin in the normal artery. In the block artery the intima becomes thick. Many times the vacant place does not remain the same because of tissue pain. The advantage of IVUs is that it can easily be seen on the empty artery. In this, calcium-rich blockage is detected in the artery. It has an accurate depiction of stunt after angio-

plasty. This advantage is Rota Ablation

The Rota emboss machine is fitted in front of the frame. It rotates from one foot to two lakh rpm (minutes on rotation). This bar removes calcium-containing blockage. After this, the exact angioplasty from IVUs is possible at that place. Free medical camp from May 24 to 27

Group director Dr. Anand Jha said that free medical camp will be organized for heart patients from 24 to 27 May in GBH American Hospital and GBH General Hospital, Bedawas. It will be available in both hospitals, including all types of investigation facilities, including eco, TMT. Dr. Amit Khandelwal and Dr. SK Kaushik will be present in GBH General Hospital in GBH American Hospital they will examine patients.

Heart surgery of world's smallest baby

A Milestone in Medical History

Udaipur: Aneonate of age only 15 days and merely 470 grams weight. He is almost the size of a palm. This pre-mature tiny toddle, born after a gestation period of 28 weeks seven months: pre-term delivery suffered from a very challenging & complex heart disease. He survived fighting all odds to be the first case in Medical History of the world. He being the lightest and youngest Indian underwent a successful heart surgery in Neonatal Intensive Care Unit (NICU).

S.P. Jain and his wife. Udaipur resident conceived after many years of marriage through IVF procedure from a nearby hospital. Fortunately she delivered by Lower Segment Caesarean Section (LSCS) procedure, in her 28th week of pregnancy. The baby developed breathing difficulties immediate after his birth. The baby was placed under the expert care of Neonatologist, Dr. Sunil Jangid of Jeevanta Hospital, in the state-of-the-art Neonatal Intensive Care Unit (NICU). The care of pre-term baby was really critical, especially as young as of 28 weeks of delivery and weighing only 470 grams. On initial investi-

gation of Echo-Cardiography by cardiologist Dr. Ramesh Patel of Geetaniali Hospital, it confirmed that the baby suffered from a condition in which the two major blood vessels of heart- aorta and pulmonary artery were connected. The connection between the two arteries is present till the fetus is inside a mother's womb. It automatically stops after the birth. If it doesn't then is being treated with the help of medicines. But in this case, heart surgery was the last option available since it didn't responded with medicines. With the permission from parents' as it was really a precious child for them. Jeevanta Hospital's team decided to call Geetaniali Medical College & Hospital's Cardio Vascular &

Thoracic Surgeon Dr. Sanjay Gandhi who have already performed such operation of a neonate weighing 700 grams at GMCH and Jaipur's Cocoon Hospital. Timely intervention and immediate assistance was required so Executive Director Ankit Agarwal, permitted their cardiac team to perform the operation in Jeevanta Hospital to save infant. Dr. Gandhi took only 30 minutes for the com-

which further avoided the complications. With the help of cautery machine and surgical instruments, the connection was stopped using a clip and surgical sutures. The surgery also assured no internal bleed-

It was the baby's low weight that prompted doctors to operate in NICU only as the shifting from one hospital to another or from NICU to an operation theatre could be life threatening. "The journey from NICU to the operation theatre could be fatal for such micro-preemies as of tender weakness and low weight," said Dr.

geons and anesthetists, including Dr. Sanjay Gandhi, Dr. Ankur Gandhi, Dr. Kalpesh Mistry, Dr. Manmohan Jindal & Dr. Dharamchand; gathered in NICU to treat this condition. "It's really a very difficult procedure because very small & specific instruments are needed to operate on such small children and resuscitate from a complex heart disease." "Nowadays, most PDAs clo-

sures are done with medicines, but only in rare cases heart surgery is required. It's really encouraging that children so young and measly weight of less than 500 grams can be operated," said Dr. Gandhi & Dr. Jangid. Dr. Sanjay Gandhi also claims and says, "It's difficult to say off-hand, but he is the smallest baby to have undergone this heart surgery with the lowest weight in India as well as world.

The surgery so operated need to be spread as a message that weight or a place like Udaipur. needn't be the criteria for performing heart surgery on a neonate. For the parents, it's not more than a miracle for their child being survived out of all the odds she had been through. "Thanks to God and doctors. my son survived though he had such low birth weight and a preterm neonate" said the parents for their prayers being answered.

Baby's Health:

Born at 28 weeks of pregnancy and weighing 470 grams, is possible the lightest baby to survive in the world. He had weak muscles, rib cage and immature lungs. Brain, kidney, liver, heart etc. were weak. No immunity, more chances of infections and internal bleeding (due to noise/injecting doses with force) which may cause sudden death. He was supplied the essential nutrients and glucose through central line drip. The medicines given as surfactant may result in delay in growth, lungs diseases, brain development problems, hole in intestines, enlargement of liver etc.

Tiny toddle miracle the surgery: He became the lightest in the world to undergo a PDA corrective operation. The previous cases so registered claims to operate on neonates weighing 550 grams, 580 grams & many in India. Out of every one thousand babies only 3 or 4 have a complex heart disease like this. The tiny toddle is recovering well and will grow like normal babies.

World's smallest cards

Udaipur: Udaipur's highly renowned International architect Iqbal Sakka made a set of cards which are indeed of silver. This set of 52 cards is just 8 by 6 millimeter in dimen-

This set of cards becomes more attractive because of the silver used in its design. The most interesting thing about this set is that one can play with these very easily with his

This world record set of cards

weigh only 2 grams. The previous record for the same was of 24 by 15 millimeter in dimension which was made by Cleveland Ohia of America. Sakka told that his design of this subtle set of cards was supported by his creation of subtle tools and equipments which led to the creation of spades. diamond, ace, king, queen etc. This card set which is clearly seen under a microscopic lens is set to enter the world record's book after its presentation is accepted for the

Prof. Chandalia has visited Peoples Republic of China, Srilanka and Thailand in pursuit of various academ-

Murugan Idly and Dosa Hub

Udaipur: Are you in search of real south indian taste and still have not found any place in Udaipur?

Though we have few good south indian restaurants in Udaipur, still the authentic taste was missing.

I used to eat outside on Sundays. This habit has dragged me to find good and new eating joints which serve real taste of india. I think a food lover needs good taste only and not the ambience. It's my personal view. Murugan Idly and Dosa Hub situated on 100ft road, shobhagpura, is the best place to have south india food in Udaipur right now. Senthil

from Tamilnadu is a DJ, socialist, writer, cricketer, state hockey captain and the owner of this restaurant. He came to Udaipur after his marriage to a localite. His search of authentic south indian taste ended with the opening of a restaurant himself. This guy has travelled almost 2500 km to introduce the varieties of real tamil food in Udaipur. I have visited this place twice with my family and trust me guys it's food is awesome. Special Masala Dosa and Jumbo Uthappam are unique in taste and size. Senthil has introduced this to the menu not only to attract customers but also to give real value of quality. The tangy taste of tomato chutney enhances the taste of this food. Senthil told me that he has combined the taste of Tamilnadu and Kerela in nariyal chutney. Fried Idly and Rasam with Pani puri are available in his branches only. He is planning to open a big south indian joint near B.N. College soon. Senthil's love for Udaipur can be seen in his work and dreams which he wants to fulfil soon. These days when youngsters are taking up jobs abroad, Senthil has opted this career to help poor people of Udaipur. He wants to build a big temple in near future. He is planning to start an NGO where he will work for the sanitization of students from various government schools to improve their health and hygiene habits. Murugan restaurant has other branches in Malaysia and Indonesia too. Visit this place with family and friends to have the taste of Tamilnadu right here in our

Wonder Cement's 'Swach Jal Sabka Haq' program across 46 cities to benefit 16 lakh people

Udaipur: Wonder Cement launched its novel initiative 'Swach Jal Sabka Hag' here today. 'Swach Jal Sabka Haq' has also been launched across 46 cities simultaneously covering the states of Gujarat, Madhya Pradesh, Maharastra and Rajasthan. The 'Swach Jal Sabka Haq' will benefit over 16 lakh people and will be executed by deploying 52 vans that will criss-cross the targeted 46 cities over 30 days, serving over 10 lakh litres of pure drinking water. UIT Chairman Ravindra Shrimali, Director Wonder Cement parmanand Patidar and president marketing shailesh mohta launched the van with flage off today.

Under 'Swach Jal Sabka Haq', general public, including pedestrians, workers, children will be served pure and cold drinking water during this hottest month of the year. The service Vans will be parked at famous and acquainted sites for two and a half hour each at multiple loca-

Mr. Vivek Patni, Director, Wonder Cement Ltd. says, "Water is a scarce commodity and come

summer the shortage becomes acute, especially at public places when people are out during the day. To ease the situation by providing drinking water timely, we have introduced 'Swach Jal Sabka Hag' as a modest step in that direction. We have identified prominent locations and areas for supplying safe and clean drinking water as last year when we covered 40,000kms serving more than 4 lakh litres of pure water. This year we are trying to take it to an even wider scale to benefit more and more people, providing with pure drinking water, on the move." Wonder Cement took this initiative in 2014 for the first time. Fifteen sites were then identified in the district of Udaipur with a large concentration of pedestrians near places like hospitals, construction sites, bus stands and served water on the go. Given the popularity of this program, the 'Swach Jal Sabka Haq' has now been extended to 46 locations across four states.
