& Much More

Suggestions from Dr. Jain

Udaipur: Suggestions from indo Australia in National work shop on Ground water Recharge, Ahmedabad for ground water sustainability (30-31May 17.)

1.No wall to wall construction of roads so that UG recharge continue during every rain.

2. All foot paths be left for ug recharge ,no cementing be done on it.footh with slope towards road.

3. Proper Road Drain holes ,net ,apertures be there so no water logging take place and no erosion of road takes place.

4. All pipes of RWh be concealed with cementing so that no body can break them as well as no whether effect will be there ,thus enhance the life of system.

5. Another opening over the existing opening should be there or leave alternate out let as they will work as safety outlet during heavy intensity of rain. 6. No dug well or Borwell be allowed without recharge system

installed. 7. Plants which uses large amounts of ug water should be

banned.eucalvotus.

8. Plants whose roots retains water like,tamarind,semal,shishan neem should be planted around water sources so that at the time need like summer they release this stored water.

9. Increase the surface water by increasing the deepth and area of the source so that ug water is maintained.

10. Concept of ug water bank nd water insurance .save water, how to save Roof roop rain water should be taught to the students/contractors & involved in RWH.

11. City BJ bhujaon jankar is must.

12. Prestige of institution in RWH.

First State Level **Biodiversity Conference**

Udaipur: Awardee of Swachh Rajasthan Award- 2016, Youth group, Pukaar presented their work and plans to protect our environment at the first state level biodiversity conference organized in Jhalawar. Information will be provided in detail with Planning and Documentation, Post Accreditation Measures, Evaluation Process Improvement, Quality Cell and Feedback, Learning Process and other topics will be organized .In this program, around 30 academicians from different universities and colleges are participating.

On World Environment Day, 'Coalition against Tobacco' urges the Hon. Prime Minister

New Delhi: Keeping the World Environment Day as the backdrop, the newly formed 'Coalition Against Tobacco' wrote to the Indian Prime Minister, highlighting the environmental dangers and degradations at multiple levels due to the activities of production and processing of tobacco. The 'Coalition Against Tobacco' is a representative body formed by the collaboration of more than 40 NGOs and many eminent citizens. It has initiated an active campaign for mass education and awareness of the ill-effects of tobacco con-

sumption. Keeping with its pro-active stance of nipping the trouble of tobacco in the bud, the Coalition has now written an open letter to the Indian Prime Minister. Shri Narendra Modi. on the occasion of World Environment Day. The letter elucidates clearly and conmental impacts of tobacco cultivation and processing.

In the submissions made before the PM, the letter states that cigarette and bidi butts are concentrated toxic and nonbiodegradable waste, which are heavy contaminants, whether they accumulate in landfills or get washed away into water bodies. Apart from polluting air, they also are a potential fire hazard.

Commenting on the letter writ-

ten to the PM, Dr Pankaj Chaturvedi an active member of the Coaliation said "tobacco cultivation leads to deforestation, soil depletion, loss of nutrients and soil degradation by excessive agrochemical usage. Given that tobacco is a cash crop, farmers are lured by the immediate financial gain and risk all the above dangers to their land.'

Tobacco cultivation needs soil

with high levels of fertility, which again results in clearing of land and getting new land under cultivation, prompted by the high financial returns. It is estimated that four lakh hectares suffer deforestation every year on account of this cultivation, which is the size of

What is also worrisome is the environmental cost of curing (processing) tobacco. The process needs huge amounts of fuel wood, which again causes deforestation, and conse-

tobacco. tion, soil erosion, degradation, loss of organic matter. The option of fuel wood is straw and crop residue, which has similar issues. The industry estimates, on a conservative basis, that 8 kg of wood is required for curing each kg of tobacco, which means that this industry burns 24 lakh kg of wood every year just for this purpose. The other use of wood is in the cigarette paper, and in pack-

ing material. A cigarette man-

ufacturing machine uses four

ultrasonic sound waves. When

the pain lessens, techniques

like stretching and isometric

exercises are used. In advance

physiotherapy technique the

against

miles of paper each hour in rolling and packaging cigarettes. As per this calculation, it is estimated that every 300 cigarettes represent one hacked tree. Commenting on the dangers

to the environment posed by tobacco curing Dr Badwe, Director Tata Memorial Hospital, Mumbai said "that it is, by itself, a significant source of carbon-dioxide emissions and air pollution. The 2010 Indian cigarette production figure of 10 billion units translates, at a conservative estimate, into 6,750 tonnes of CO2. This again does not consider any side-effect impacts, like historical emission and mitigation ability."

"The World Environment Day is an excellent mechanism to raise awareness and sociopolitical momentum about enervating factors like ozone depletion, carbon emission,

Sarada Panchavat Samiti.

deforestation and desertification, toxic chemicals and global warming. In fact, it is wellknown that the World Bank has, since 1991, refused to invest or extend loans to projects involved in tobacco production, processing and marketing.' said Sanjay Seth, COO, Sambandh Health Foundation an active member of the Coaliation.

The Coalition has highlighted these dangers to the environment at a significant juncture, where recently 195 nations have put their seal of approval and commitment on the historic Paris Agreement which mandates them to enhance implementation efforts to cut down on emissions. The risk -from rising oceans and depleting glaciers - are too wellknown and the Paris Agreement reiterated the risk to farmers, rivers and indeed civilization as we know it.

SLIP DISC- CAUSES, SYMPTOMS AND TREATMENT

Dr. Kalpesh Purbia Mankind has made awesome

advances in several fields of life. However, at the same time he has become a victim of several diseases that have made his life miserable Back pain that at times turns into slip disc is one of them.

Spine that supports the whole body can be divided into three parts- cervical vertebrae, thorasic vertrebrae and lumbar
