

Microvita are the mysterious creative entities (cosmic seeds) of life and matter in the Universe. The theory of microvita provides a unified field, philosophy to provide explanatory framework for the mysteries of science regarding origin of matter, origin of life and evolution. This new conceptual link between varioys sciences needs scientific validation which may require well advacned physical laboratories as well as high developed conceptual minds.

Introduction

Science is a specialized activity seeking to know the causal laws underlying natural phenomena. The knowledge which it seeks is always verifiable and eminently useful. Science in a broader sense is that which teaches the proper use of material things. It should be for service and beatitude and always be utilized for the proper progress of human society. Unfortunately, the modern science, despite its innumerable spectacular achievements, has not yet fathomed the mysteries of mind much less of consciousness. The reason is that science has an analytical (reductionist) view point and what is required is a synthetic (holistic) mental stance. Spirituality, on the other hand, concerns the Supreme Cognitive Principle based on rationality. It is also a science in itself, far advance than physical science, more subtle, precise, practical and synthetic in

In every scientific field, there is a search for unity within the diversity of observed phenomena. Physicists are trying to find a fundamental theory of matter and energy - a unified field theory. Biologists are searching for a unified theory of evolution. Spiritualists in their search are trying to experience the wholeness of singleUniversal entity. So, in every field, scientists and spiritualists are trying to invade the mysteries of this phenomenal Universe in order to get one final answer. In this search, the unanswered questions are the origin of matter, origin of life, origin of Universe and evolution. Physicists and biologists are working in this field to get answer of these enigmatic queries. In this diverse search of matter, mind, life and evolution, is there any scope of unifying concept which imbibes and explains all these questions and later on this concept can be proved by developed scientific methods? The answer is affirmative. The unifying concept is theory of microvita. It is a new scientific concept introduced by Shrii P.R. Sarkar2 in 1986.

Science of Microvita: A New Paradigm

It is perhaps the most unifying ideas in physical and other branches of science which are existent and which are yet

Microvita - new science

Microvitum (Micro - Small, Vitum - living) or in pleural microvita as described by Sarkar are "the entities or objects which come within the realm of both physicality and psychic expression which are smaller or subtler than atoms, electrons or protons; and in the psychic realm may be subtler than ectoplasm or its extrapsychic coverage, endoplasm.'

Physicality

Microvita are smaller than electron on physical level and smaller than ectoplasm (mind stuff) on psychic level but they are neither electron nor ectoplasm. They are in fact a sliver line between matter and mind (idea). If atom is the constituent of matter, idea is the constituent of Microvita In other words, if matter maintains a close proximity to microvita, maintains a close proximity to idea. If atom is powdered down then one can get microvita, but if microvita could be powdered down by any means, one can get idea Thus microvita are link between matter and con-

As microvita are so small and subtle entity it is not going to be easy to demonstrate and prove their existence with the presently available laboratory facilities. Therefore, we can think of microvita for the time being as a creative scientific hypothesis till we get verification of their existence scientifically or intuitionally i.e. in both physical and mental laboratories.

Basic characteristics

Microvita have all the characteristics of living entity, like, existence multiplication. mobility and death. By nature, microvitum is more energy than matter so it can travel and Microvitum, being the minutest entity or object, therefore, it can't have structure that of an atom not it can have its structural formula. They are the creation of cosmic mind. They are the mysterious emanations of cosmic factor.

They are conducive in physical, psychic and spiritual evolution but not the original controller. They are created by cosmic mind which in turn is an evolutionary product of pure consciousness.

Categories of microvita Microvita have been catego-

rized as per their density or subtlety or depending on nature of behaviour. A) Based on density or sub-

First: Crude variety

These are the microvita coming within the scope of perception but requires a highly developed microscope. The so called 'virus' come under this

category which require a move more freely in both the sophisticated electron microscope to perceive. However, virus is a vague term, better term will be microvitum.

Second : Subtle variety

This category of microvita are subtler and therefore, not coming within the scope of a perception but coming within the scope of perception as a result of their expression or actional vibration. Here the physical laboratory means will not be helpful bur require a developed intuitional mind. As the subtle variety of microvita can move in psychic sphere which is a subtle region that exists in the mind: they can move from one mind to another and can carry ideas from one mind to another. A person who has a certain idea may be that idea was brought to that person's mind by a microvitum from another mind. It is therefore, possible that an individual who can control microvita will be able to spread his ideas with the help of microvita to the society at large.

Third : Subtler variety

These microvita are very subtler and therefore not coming within the scope of common perception but coming within the scope of a special type of perception which is actually the reflection of conception within the periphery of perception. It is perceived or known by only persons with highly evolved, spiritually oriented conceptual minds.

These microvita exist at borderline between the psychic and spiritual space (psychospiritual microvita). They influence human mind in such a way that mind is attracted towards spirituality. These types of microvita have been called luminous bodies. In Indian traditional script, they are also called as siddhas

microvita have their field of activity in matter. They create a stir within the physical struccosmos. Subtle variety, on the other hand, functions within the world of perception through inferences like sound, touch, form, taste and smell. They directly function within the

subtler realm of human mind. B) Based on nature

Microvita based on nature can be categorized into positive, negative and neutral or ordinary. As microvita are composed of both ectoplasm and matter, positive microvita are having more mind than matter while negative microvita are of more matter than mind.

Positive microvita They are pro-ectoplasmic meaning thereby, they are of more ectoplasm than matter. They start their functioning first in the mental level then filters down towards physical matter. They are beneficial to

the human beings and help in

their spiritual elevation. They

physical and psychic arenas and barely touch the border of spiritual world. But they cannot enter the spiritual world (fig. 3). They don't spread by natural means but by specially created waves.

Negative microvita These microvita are pro-materialistic, having more matter than mind (Ectoplasm). They start functioning in matter and moves toward the mind. They move only in the area of physicality and just touch on the psychic arena; but can not enter the psychic world (Fig. 3). They are detrimental to human beings and spread on their own by natural forces.

Fig. 3: Field of activity of microvita

Most of the viral diseases for example, AIDS, SARS, Dengue, Chickenguniya, Swine flu, bird flu, hepatitis etc. are the diseases caused by negative microvita and not by virus as thought of.

Positive and negative microvita maintain a balance in this world. Whenever the collective strength of Negative microvita exceed Positive microvita, the world moves towards degeneration. When positive microvita are in excess ta is not new but has a history. Shrii P.R. Sarkar has modernized the ancient traditional knowledge and put in a scientific context. It is in real sense a synthesis of modern and ancient wisdom, a synthesis of science and spiritu-

Movement of Microvita

Microvita have remarkable mobility. They move throughout the entire universe from one celestial body to another. They move everywhere, crossing the boundaries of nebulae, piercing through milky ways, galaxies, stars, satellites, planets and meteors, without caring for the atmospheric conditions like temperature and pressure. They move through a medium or media. They move through inferences (Tanma'tra's) of smell, taste, visual forms, touch and sound. The most subltle microvita move through the

Physics and science of microvita

media of idea.

Physics describes fundamental entities of matter as waves and particles. Some experiments treat them like waves while other experiments like particle. For example electron is considered to be both would be a particle.

Therefore, matter would be created when a spiro moving group of microvita move in a closed form. Those microvita would then be called an electron or a photon. Interestingly, microvita in the sub-atomic particles could create their wave length which is observed in physics experiments as ghost effect. This needs further

Microvita - the intelligent

organizers of energy Microvita are more of energy than matter. They have qualities of energy but they are not the same as energy. Both energy and microvita are active. The effect of energy is in physical plane, it is a blind force, must be directed by intelligence, indestructible but transferable. The effect of microvita is in physico-psychic plane, they have a consciousness and behave with a type of intelligence, they can live and die, non transferable and cannot be interchanged. In a nutshell one can designate microvita as "Intelligent

Atoms, Electrons and Microvita

Life is not explained scientif-

Origin of Life

ically. How it came into existence? The current theory tells that life evolves from carbon atoms and molecules. The carbon molecule is the basis of every protoplasmic structure. But as per the theory of microvita, the root cause of life is not the unicellular protozoic or unit protoplasmic cell nor research3. carbon atoms or carbon molecules but this unit of microvitum. If one considers microvita as the fundamental organizers of energy; then microvita also organize atoms and molecules into the smallest living structure which we call life. In fact, the carbon atom itself is constituted of millions of microvita. The theory of microvita can really throw light on the different facts of cre-

organizers of energy".

Atoms, Electrons and Microvitum all are the small

> The recent experiment on 'Higgs-Boson' or 'God particle' is also not the right way. The term 'God' in 'God particle' is a vague and it is not wise and even meaningless to connect Him to only one thing specifically. In fact, they are virtual particles with a mean life time of 10-22 sec4

come out of nothing?

ation of matter and life. This

is one are of research that unify

different areas of knowledge.

Creation of matter / Origin of

Scientifically, the question,

how matter first came into

existence still remain unan-

swered. The most popular the-

ory was Big Bang theory sug-

gesting that Universe was cre-

ated out of nothing and came

into existence like an explo-

sion. However, it is not logical

to think. How can something

Universe – a scientific view

Creation of Matter / Origin of Universe - A spiritualist

Science of spirituality designates Universe as a projection or transformation of Cosmic Consciousness. Consciousness using its creative power, transforms itself into Cosmic mind, which in turn transforms part of itself into the physical world. It may come

you can't get something from nothing even if you are talking about the Origin of Universe. The most important thing of spiritual philosophy of cosmic cycle of creation is, that it shows, that matter comes out of consciousness (cosmic

mind) and unit mind is evolved

from matter. Microvita are the creation of cosmic mind and instrumental in the creation of matter and mind5.6. The theory of microvita therefore, throw light on the different unknown facts of creation of matter and life and because of their movement through the entire universe, they can spread life. This is how life has spread through the Universe and reached the earth. It is not by a random evolution of a primordial soup. It is the microvita, which are participating in organizing carbon molecules into living

Microvita - for human wel-

beings and spreading life

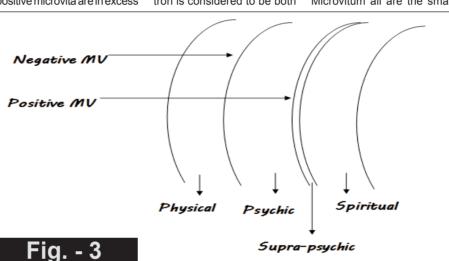

everywhere. This is one area

of research that unify differ-

ent areas of knowledge.

The theory of microvita has immense potentialities in applying for human welfare. The field of chemistry, biochemistry, biology, commerce, pharmco-chemistry, biotechnology and pyro-technology will undergo a revolutionary change and they can be applied for betterment of living beings. What is required is extensive research in this

Social environment can be improved with the application of Neohumanistic education. It will be further uplifted if the science of microvita (microvitology) is incorporated on this education system; where by density of positive microvita may be increased by inclusion of concept of sentient food, the effulgent of good company, the impact of good literature on the mind and wisely selection of music, lyrics and devotional chanting in the curriculum along with timely incorporation

In short, crude variety of of negative microvita, a spiritual revolution occurs. At present, we are in the phase of degeneration. Only the colmove through inferences. ture and involved in emana- lective strength of positive tions of life throughout the microvita can save us. Shrii Sarkar emphasizes that "we are to invite positive microvita for our all-round progress and all-round elevation and to denounce the advancement of negative microvita because it is detrimental to the cause of sweet and beautiful Universe". For that matter, to increase positive microvita, we have to chose strictly sanctified food (Sa`tvik A`ha`r), Good company (Satsang), Good books and literature (Sva'dhyaya), Good songs (Bhajan) and devotional chanting (Kiirtan). In ancient times, the Indian sages described different species or entities which fit Sarkar's description of Microvita. These are seven types of Devayonii (Positive Microvita) seven types of Pretayonii (Negative Microvita) and types of Gandhyakshinii (Neutral Microvita). Therefore, the basic concept of microvi-

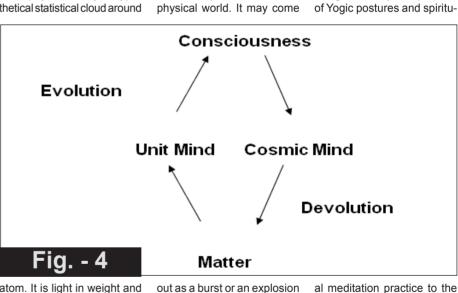

as a wave and a particle and so also the photon. Microvita can also be considered as both wave and particle

moving and therefore, has certain rhythm, wavelength and vibration and so also microvita. By the movement of microvita, fundamental particles of physics like electron and photon are created. When millions of microvita are moving together they would organize their own energy to create the fundamental particles. As per atomic physics, photon of light has certain spin, moves in certain direction and also have a certain wavelength. When something that has a

certain spin and direction, it actually creates a shape as a spiro or a helix. Sarkar has also described microvita in a spiro movement. If the spiro moving microvita didn't move in a straight line but turned into a curve and close upon themselves and continue to circulate their energies in a closed form then that entity created

An Incomplete Goodbye - V

She couldn't resist herself. She went running. Running towards Abhay. Abhay couldn't realise what actually happened. Kritika ran into him, and held him so tight in the middle of the market. Within a minute, people were adoring their presence. One of the guys actually dropped off his chocolate bar. This was really romantic and special.

A typical 'Awww' moment.

(Phone rings!!!!)

Kritika Calling.. Abhay immediately stood up from his virtual time machine and .

"Where the hell have you been? I have been trying the whole night." (Abhay)

"Liar. Anyway I slept. Something important to discuss? I'm getting late for my office." (Kritika)

"Now don't be too smart to avoid things. I'm sorry. I wasn't ready for it so instantly. I've been thinking about us all night, recollected our school days back then. See Kritika, I know I acted weird, let you go last night but understand it. There was a time when I finally accepted that we are not meant to be."

"Now, leave for your office and I'll come to pick you up in the evening. Cool?"

Kritika knew that very moment that something romantic was about to come her way real soon. She went to her office happily,

waiting for the time to pass by. Waiting for Abhay. (in the evening)

"Do you remember my proposal?"

"Oh yes! It was so beautiful" (Kritika recalls the whole scene, her eyes are full of stars)

"Where are you taking me Abhay?" (Full of surprise)

"Ready for Déià vu?"

"You're not serious tell me?" (couldn't resist her smile off)

"I am 100% serious"

Abhay took her to the La Patio. Kritika is excited to see the rooftop, table for two in the middle of it and people welcoming the

couple with great joy. Abhay escorts her to the table, pulls the chair and was on his knees the very moment.

"Kritika, its like a dream to have you in Mumbai, to have you by my side. There was a time I actually realized that you are just a dream to me but some stories are meant to happen. Some goodbyes are meant to be the call of a next meet. We are lucky to be part of the 'some'. Without wasting any time, Will you marry me Ms. Kritika?" (Abhay, puts a gorgeous silver ring in front

"Idiot! Yes, I will. I won't leave you this time. I love you." (Kritika took the ring and replied with tears in her eyes)

The whole restaurant clapped after seeing the beautiful scene. They drank some wine, ate their favorite Italian food and tipped the waiters heavily that day. A beautiful day to remember for both of them and certainly a romantic vibe for the audience there. Kritika and Abhay moved in. They finally started to live together. What they both had left a long time ago, began again from the same point. Kritika spoke to her parents and Abhay to his. Abhay's parents were happy to know his decision of marriage. They wanted to meet Kritika.

Kritika's parents though were a bit annoyed. They were not at all ready for a love marriage. Abhay and Kritika both had a heavy task on their shoulders—to convince Kritika's parents. Kritika met Abhay's parents. They spent a good time together and not to forget they were adviced by Abhay's parents regarding how to convince Kritika's parents. 4 months later.

A card drops in my mailbox.

'ABHAY weds KRITIKA'

I remember how Abhay used to be around us and around Kritika. He is a gentleman for sure but he is a kind lover too. All these 7 years he waited for Kritika. Even though he knew that they had parted their ways long back, but the dream of having her was always inside. This is not a story of a guy being mad behind a girl, it's a story of love. Love which is destined, a love which had several goodbyes but none was the last. Kritika accepted her mistakes, that's why God helped her to meet his true love. If she hadn't be apologetic to Abhay, she could never have her name on the wedding card.

So readers, its a decent story of two hearts becoming one but the message is simple and loud enough. Love the person you are with, cherish him forever if he respects you and cares a lot for you. There may be a road full of obstacles in your way but remember not all goodbyes are the sign of and end, maybe they are a sign of you and your partner starting again.
