## The Beauty of Democracy

After decades of experience, the democracy of our country is far more matured now. First and the foremost thing is that people now step out to vote no matter what's the weather is like. And they just don't vote, they vote sensibly. Our people can now differentiate between a fake promise and a doable one. The leaders repeating rhetoric years after year and running propaganda are now losing. And those who are talking sense with responsibility are getting the love of the people. And that's now the real power of the world's largest democracy.

If you examine the past few elections, you will understand what this means and why the sense of the public cannot be underestimated. Remember the famous Delhi elections between 2014 and 2015 where people chose all seven MPs to support a stable central government led by the NDA. And then when it came

### Editorial

to state assembly elections, they showed humongous faith in newly born Aam Admi Party. Now, the story did not stop here—the same voters again chose BJP in the local body elections of municipal corporations of Delhi. And then again in a by-election for an assembly seat, the people voted AAP to power. This sums up the story. People now review every occasion against the credibility of the representatives and their ability to deliver. Perform or perish is the key today. Unlike earlier, people keep a good memory—thanks to social media where things keep popping up every now and then. One politician may deliberately twist a statement by the other and present it in bad faith but when people hear it, they know and interpret the message very clear. The Intelligence Quotient of the people of the country is much higher than some people think.

So this time, the idea of fooling the public will not work as the owners of the country are watching. Each election is different from the other. Every time, the same issues will not work but you need to be focused on the spectrum of the election and scope of promises. Only credible promises, talks about achievements, and people-centric ideas will be entertained. Politics has changed so has the people. Welcome to the new and aware India!

## PM Modi to address 125 rallies in BJP election campaign blitz

**New Delhi:** Prime Minister Narendra Modi and party president Amit Shah, the two biggest names in the Bharatiya Janata Party (BJP), will address around 125 and 150 rallies between the last week of March and mid-May when campaigning for the summer's parliamentary elections end.

The campaign schedules of the two leaders are being finalised, two BJP leaders said on condition of anonymity. The BJP launched its campaign for the national election with the Vijay Sankalp Sabha at around 200 locations on Sunday, although the Prime Minister was not part of this. More such meetings will happen at around 250 locations on March 26.

"Modi will launch his campaign with a rally in Meerut on March 28," one of the two leaders said. "He will address another rally in Jammu the same day." He will be in Odisha on March 29 and April 1. He will also hold two rallies each in Assam and West Bengal on March 30 and April 3. Modi has a public meeting at Itanagar on March 31, and will hold a video interaction on the same day with those who extended support to his Main Bhi Chowkidar (I, too, am a watchman) campaign.

"We are drawing the plan in such a way that it takes Modi to each of the states in every round of election," the second leader said. Polling for the parliamentary elections will take place in seven phases between April 11 and May 19.

Modi is BJP's most popular campaigner, and the party won the 2014 parliamentary election following a campaign centred on him. Between September 2013, when the BJP declared Modi its prime ministerial candidate, and the end of the campaign for the 2014 election in May that year, he addressed at least 425 rallies across the country.

The party has divided the entire country into different clusters, with each of them comprising three-four parliamentary seats, the two leaders said. PM Modi will address a rally in each of these clusters.

Uttar Pradesh may have 20-odd clusters, and Modi will address at least that many public meetings in the country's most populous state. Bihar and West Bengal will see Modi addressing at least 10 rallies during the campaign. These three states will vote in each of the seven phases, which means the Prime Minister will make multiple visits to them.

"The focus of our campaign this time is on Uttar Pradesh, Bihar and West Bengal for obvious reasons," the second leader added. Uttar Pradesh sends the most representatives to Parliament (80); West Bengal, the third most (42); and Bihar, the fourth (40). Maharashtra sends the second highest number of representatives to Parliament (48).

Uttar Pradesh, West Bengal and Bihar account for 162 Lok Sabha seats and the BJP-led NDA won 106 of them in the previous election. While the BJP faces a strong challenge in Uttar Pradesh following the formation of an alliance between the Bahujan Samaj Party, Samajwadi Party and the Rashtriya Lok Dal, it is up against an alliance of five parties in Bihar, which is led by the Rashtriya Janata Dal.

"We won 104 out of 120 seats in these two states (Uttar Pradesh and Bihar) in the previous election. The Modi campaign is to ensure that we repeat a similar performance in Uttar Pradesh and Bihar," the first leader said.

The BJP could win just two seats in West Bengal and only one in Odisha in 2014. It has high hopes of making big inroads in these two states this time.

## 20 PC POOR FAMILIES TO GET RS 72,000 ANNUALLY, SAYS RAHUL GANDHI

**New Delhi:** Congress president Rahul Gandhi on Monday declared what he described as his party's "groundbreaking" anti-pover-

ty measure with no parallels anywhere in the world.

Addressing a press conference here after a meeting of the Congress Working

Committee, Gandhi steered clear of the opposition's alliance woes and said he will not take any questions on any other issue save the Congress's Minimum Income Guarantee Scheme.

"I am not going to say anything today, except that we are promising a groundbreaking idea, which will be the second phase of assault on poverty after the first phase of assault through MNREGA," Gandhi said in response to a Tribune query on what happened to the Congress-led opposition's idea of a joint seat by seat fight with the BJP. On the scheme, Gandhi said the Congress

would give direct cash transfer of Rs 72,000 in the bank accounts of 20 per cent of India's poorest people.

"The basic income line we will consider is Rs 12,000, which means we will top up the incomes lower than Rs 12,000 until people reach the basic income of Rs 12,000. So if anyone is earning Rs 6,000 a month, we will top up another Rs 6,000," said Gandhi.

He said the scheme will benefit five crore families and 25 crore people directly.

"I don't want two Indias one for the rich and the other for the poor," Gandhi said.

The Congress manifesto

will contain the promise of the scheme, which the party hopes to work as a game changer in the upcoming elections.

Gandhi said fiscal consequences of the scheme had been analysed and it was "perfectly doable". He said if the BJP could give money to the rich, the Congress could give money to the poor.

NYAY (NyuntamAay): Minimum Income Guarantee

Rs 12,000 a month would be treated as the minimum income line for the purpose of the plan. If you have a monthly income of Rs 6,000, Cong govt 'will give Rs 6,000 additional to take it to level of Rs

12,000. Once minimum monthly income crosses Rs 12,000 a month, the beneficiary would be deemed to have crossed the basic minimum income line beating poverty

"The scheme is fiscally prudent. Money is perfectly available and the scheme is perfectly doable" Rahul Gandhi, Cong Chief

'We are giving more, it's Cong bluff'

"If it is tested on simple arithmetic, Rs 72,000 for five crore families works out to be Rs 3.6 lakh crore, which is less than 2/3rd of what we are giving. A bluff announcement" Arun Jaitley, Finance Minister.

## 67 Year Old Walks Again After Half Knee Replacement

**Udaipur:** For 67-year-old Mrs. Danmalikin, a Nigerian national who had lost all hope of walking on her feet, life is finally moving again. Mrs. Danmalikin was experiencing terrible pain in her knee joints and left foot for many years.

This, coupled with a big toe deformity, made it near to impossible for her to walk properly, without support or a walker for last 4 years. On 21st Feb She was operated on by the expert doctors at Indraprastha Apollo Hospitals (IAH) who carried out a relatively new and advanced procedure, 'Half - Knee Replacement'. The procedure involved replacing part of the damaged part of knee instead of total knee replacement. The successful surgery was performed by Dr Yash Gulati, Senior Consultant, Joint replacement and spine, Indraprastha Apollo Hospitals and his team.

Elaborating on the patient's condition, Dr Yash Gulati said, "The patient was in a very bad shape when she came to us. She had severe problem in her right knee and a deformed big toe in the left foot. She was unable to walk even a step without help. After some time under observation, and some necessary tests, we decided to perform a half - knee replacement surgery, also called oxford knee. The procedure requires a small incision. Only the part of the knee affected by arthritis is operated on and a small implant is placed. Also, there is a mobile meniscus between the two small metal components. To keep the natural movement intact, the outer part of the knee is not touched. The instrumentation through which it is done is known as microplasty

instrumentation. Along with this, the toe deformity was corrected using what is known as the Keller procedure."

"The patient started recovering just a day after her surgery. She was fit to go back to her country just ten days after the surgery. She is able to walk on her own, without help," further added Dr Gulati. Post the surgery Mrs. Danmalikin said, "I tried all possible treatments, but didn't get any relief. When I consulted Dr. Gulati at IAH, I was in terrible pain and could not walk without a walker or even do my daily chores. I had to depend on others for even the smallest job. Today, it is because of the continuous efforts Dr. Gulati and his diligent team that I am walking on my own. I am really grateful to the team here."

Talking about the half - knee replacement surgery, Dr Gulati said, "It is a relatively new procedure where, instead of a total knee replacement, only the part that is damaged is replaced depending on the requirement. Since it is a smaller operation without cutting any muscles, recovery is fast and patient is back to normal activities very soon. Cross-leg sitting is also possible. There is no need for blood transfusion. There is a lack of awareness about partial knee replacement and the benefits associated with it and public needs to be informed about it. About 30% of patients undergoing total knee replacement would do well with only half knee replacement." "Usually it takes less than an hour to perform a partial knee replacement surgery. It involves small incisions and thus the recovery time is less," concluded Dr Gulati.

## "Yeh Cheez Badi Hai Mast Mars"

**Udaipur:** "Science is that which relies on Empirical evidence and can be proved"

Said the world renowned Space Scientist, Dr. Anil Bhardwaj, Director, Physical Research Laboratory, Ahmedabad, in reply to a question "what perspective of science and technology needs to be promoted at school level-science and technology as a collection of various facts and miracles or the scientific methods through which we can test the explanations we give?"

"Yeh Cheez Badi Hai Mast Mars"

Quoted Dr. Anil Bhardwaj, Director, Physical Research Laboratory, referring to the witty advertisement of Amul published in 2014 as an apt remembrance of successful launching of India's Mars Orbiter Mission (MOM)-which includes Mars Exospheric Neutral Composition Analyser (MENCA) on which he worked extensively.

He proudly recollected how India, became the first Asian nation to reach the Mars orbit and First Nation in the world to do so in its first attempt. This was possible only due to a dedicated team of professionals working day and night at the Indian Space Research Organisation (ISRO) and due to the supportive environment available for science and technological research and development in the country.

Dr. Bhardwaj was delivering a lecture on "Indian Planetary Missions: Challenges and Opportunities" at a day long Science Outreach Program organised jointly by PRL, Ahmedabad, and VidyaBhawan Society, Udaipur, at the VB Auditorium today.

He gave a background of ISRO and PRL and their work related to study of the composition, dynamics, formations, interrelations, history of planetary systems and processes. In simple terms, and with the help of documentary films, he shared the details of Mangalyaan-1: India's First Interplanetary Mission

including, the objectives of the mission, the phases, the challenges faced in each phase for example, payloads, tracking the launch and the mission, spacecraft autonomy, handling power systems, testing of sub systems during launch, propulsion into the Mars orbit, handling the idling engine, etc. Similarly he discussed the launch and challenges related to Chandrayaan-1.

He shared details of Chandrayaan-2, India's second mission to the Moon which will be a totally indigenous mission comprising of an Orbiter, Lander and Rover as well as Aditya-L1 (Langrangian point) mission to study the Sun.

He motivated, and apprised the under graduate and post graduate students about the facilities and opportunities (scholarships/internships) available at PRL for research in fundamental science. In his welcome address, Shri Ajay Mehta, President, VidyaBhawan Society, traced the history of VB and its ethos and role in national reconstruction pre and post independence. He shared VB has always strived to create an openness in students by building and promoting qualities of scientific temperament, responsible citizenship, self reliance, critical thinking.

Language was never a barrier for learning and its approach has been to promote equity and equality. He expressed hope that such programs

would continue, and go a long way in inspiring students to become scientists and infuse new vigour to scientific research and development in the country.

Dr. Suraj Jacob, CEO, VidyaBhawan, lauded Dr. Bhardwaj's abilities to communicate high level science in the spirit of adventure before the students and praised how, through 'effective science communication', he easily reduced the otherwise existing hierarchies between scientists/science professors/teachers and students. He stressed that science can be improved through two way communication with children.

While the first half of the day comprised lecture, question-answer session, in the second half, movies on space science were screened by Dr. Ramit and Dr. Bhuvan of USO followed by an interesting round of question answers with the school and college students.

An exhibition was set-up at the venue wherein, VB students and USO research scholars displayed charts and presented short videos related to the solar system.

The program, which certainly created a buzz of curiosity among the students was coordinated by Dr. Anil Mehta, Principal, VidyaBhawan Polytechnic College and facilitated by a joint team of VB and USO representatives. It is hoped that this partnership will continue and benefit the society at large.

## World Water Day Interaction in Udaipur

**Udaipur:** Dr. PC Jain with the help of Satish Bhatnagar done hard work on World water day by having interviews with doctors and others for RH in word stanza Dr Jain said "Water turned Sweet, Every hospital should have roof top rain water harvesting" here are the few citations, QUOTE UNQUOTES Dr D.P. Singh the Principal R.N.T. Medical College said the above statement as per his experience as he himself in his house & in Maharana Bhopal Hospital installed this system. No microbial contamination occurs in hospital when roof top rain water harvesting is done to recharge the water body in the hospital or clinic. Save Future Health of Child Dr B. Bhandari the former Principal of R.N.T. Medical

College and a senior child specialist says that to keep the child healthy they should get the pure water which can be procured if the rain water harvesting is done in the house to recharge the bore well which will improve the quality of water. Save River, Save Rain Water in Every House Former President of the Rotary club Laxman Singh Karnawat said that due to excessive removal of the sand from the river bed the stones of bot-

tom are not retaining the water. Both social & Government organizations should begin the awareness program to save the rain water during rain and in daily usages during non rainy seasons. Prevent Stone Formation Dr H.L. Khimesara the senior Urologist and former Head of department of surgery in R.N.T. Medical College says

that if you want to prevent stone formation in the kidneys take lot of water. He narrated a study of Israel where in one village the people were asked to drink sufficient pure water and the other villager followed their own way of drinking. The people who used to drink sufficient water had 30% less incidences of stone formation in their kidneys. So rain water harvesting is the best way to get purest form of water. No wall to wall Roads, No Cementing below Interlocking tiles Pramod Jhanwar the President of Maruti Seva Samiti emphasizes that no wall to wall road construction be done in the street and some space should

be left for natural recharge of rain water through this space. He also says that a layer of sand should be there below Interlocking tiles are installed so that natural rain water can percolate through the sand. Rain water harvesting is the only way to save the water for future generations. J.S.S.(Jalsarakshan Samiti). Me et A meeting of J.S.S. (Jal Sarakshan Samiti) of students of Guru Govind Singh Senior secondary School was also conducted here on this day 22 March 19 to celebrate world water day. They were shown the technique of Dewas water Filter by Dr P.C. Jain through which roof top rain water is passed into the casing of the Bore -well, well, tube well.
