

The Three Farm Laws are Anti – farmer and Pro-capitalists

Dr.H.S.Chandalia
After forty days of constant Dharna on the borders of Delhi, the Union Capital, braving the cold and rains the farmers are determined not to go back until the three farm laws are repealed.

In the meantime forty two farmers have laid down their lives for the movement. The police have put barricades in the way of farmers who wanted to protest in Delhi. Seven rounds of talks have failed and the government too is not willing to buzz.

That the government is under the pressure of their corporate friends is not an unfounded allegation. Congress Member of Parliament from Punjab Jasbir Gill has alleged that Ambani and Adani have floated 53 companies related to agriculture in recent past which the government is trying to benefit through these legislations.

Eight companies with the title Adani Agri Logistics and Adani Logistic Services have been registered from 2006 to 2018 of which seven were registered between 2016 and 2018. Seven out of eight have been registered in Gujarat though in their titles names of cities in UP, Bihar and Haryana are mentioned. Adani group has been constructing food storage facilities since 2005.

Their claim is that they are creating these facilities for the Food Corporation of India. But once the three farm laws are implemented there will be no need for FCI to buy food grains as the Essential Commodities Act will become redundant and the Public Distribution System will be either withdrawn or it will become so weak that there will be no need for FCI to procure and store food grain.

The three farm Acts were introduced as ordinances in June 2020 when the Covid-19

impact had shaken the entire nation. As per the constitution of India Agriculture is a state subject and is a part of the state list. The Union Government cannot legislate on agriculture.

The bills were passed in September 2020 without proper discussion in the Parliament and every one saw how the chairperson of Rajya Sabha Dr. Harivansh did not permit division and let the ruling party pass the bills through as if there was a great emergency amidst violent opposition by the opposition benches.

The movement against these three farm Acts has been unprecedented. Despite suppression by the state, use of force, malignant representation in Media and massive campaign by the entire government, it has emerged stronger and

has earned the sympathy of the masses. Nearly 57% population depends on agriculture which is the biggest shock absorber in the economy of India. This has been amply proved during the Lockdown

period. The agitation has spread in Punjab, Haryana, Rajasthan, Maharashtra, Andhra Pradesh, Karnataka and Telangana.

In Udaipur also a rally was taken out by the left and demo-

cratic organizations on 8th December in support of the Bharat Band call and later the Member of Parliament Arjun Lal Meena's house was Gheraoed and a memorandum was given to him.

Indira IVF completes 1 lakh IVF procedures with the help of imported advanced technology

Udaipur: Indira IVF, India's leading fertility chain, attributed its therapeutic success rate to the use of advanced technology in its centers, such as electronic witnessing systems and closed working chambers. Indira IVF was the first organization to do more than 100,000 procedures in the country. It has established itself as India's largest infertility specialist clinics chain.

Electronic Witnessing Technology sourced from Denmark and Closed Working Chambers Technology imported from Australia support two essential aspects of Assisted Reproductive Technologies (ART). Electronic witnessing technology uses RFID (Radio Frequency Identification) chips tagged on test tubes of sperm samples and dishes that store eggs. This helps to ensure that individual samples do not mix. Closed working chambers provide a controlled and suitable environment like the Manav body for handling these samples; This keeps the processes clean and safe, increasing the chances of success many times.

Indira IVF co-founder and director Nitej Murdia said that we understand that infertility in India is a medical condition and results in social life. Couples receiving treatment face many challenges, and uncertainty associated with the outcome is the biggest concern. Thus, assurance of successful pregnancies from the IVF cycle is paramount. Murdia explained that we want to make specific, advanced, excellent technologies sourced from abroad such as electronic witnessing systems and closed working chambers equally accessible to all those who trust our treatment and help to give them mental peace. Want to do this Through very meticulous standard procedures, we have been able to achieve a 74 percent success rate in Indira IVF.

Dr. Rajiv Kayastha, Regional Director of Kapur Surgical, a company providing electronic visioning technology to Indira IVF, said that we are proud to collaborate with Indira IVF, the largest users of our technology in the country. Considering that IVF Specialists work on multiple processors at a time, RI Witness Technology is a full-proof system that eliminates the possibility of any kind of mix-up at any stage of the IVF process.

The foundation of Indira IVF rests on making affordable and excellent IVF treatment more accessible to interested individuals and couples. By bringing these techniques, this determination will become more robust, and people will get control ability to handle their reproductive health. Given the large number of inquiries coming from Tier 2 and Tier 3 cities and its effort to provide affordable and best quality treatment, the company opened five new centers in Tier 3 cities - Nanded, Warangal, Sirsa, Gulbarga, Ujjain. And recently a center has been opened in Noida. Indira IVF has a total of 94 centers across India.

Special Award from Soil Conservation Society of India to Dr. Shanti Kumar Sharma

Udaipur: Dr. Shanti Kumar Sharma was conferred with the Special Award by the Soil Conservation Society of India for his technical development research and dissemination work in organic agriculture. Dr. Sharma has researched various aspects of organic farming and has provided an organic package of practices and new technology for different crops at the state and national level to farmers and organic growers. But he has done various research projects and training of scientists of the country in organic farming. Along with the work done by Dr. Sharma, organic input production, soil and water conservation, increase of carbon in the earth, number of microorganisms in soil New techniques of growth and production of organic inputs by the resources available by the farmers on their farm were worked out, so that the farmers could adopt organic farming from their resources. Dr. Sharma made it easy for the research work of organic farming. The National Organic Farming Network Project at Maharana Pratap University of Agriculture and Technology was awarded the first prize at the national level, and the visit to the farmers on the Organic Farming Training Unit prepared under organic farming. And the farmers and extension workers of the state and other states made extraordinary cooperation in advancing organic agriculture through a scientific method, in this way, the state and national level in the works of conservation of natural resources and production gains in organic farming through correct scientific knowledge, capacity building But the practice got special recognition at the national level.
